c:geo User Guide

Welcome to the c:geo online user guide!

This site is currently under construction!

While we consider the user guide completed by now, we would like to get your feedback first. If you miss any information or see any incomplete or wrong descriptions, please provide us your feedback!

We started translating this guide to other languages. We need contributors, who are willing to help us translating this guide into their mother language. If you are interested in helping us with that, just let us know.

About c:geo

c:geo is an open source, full-featured, always ready-to-go unofficial client for geocaching.com and offers basic support for other geocaching platforms (such as Opencaching). It does not require a web browser or exports - just install it and start right away.

c:geo is only a client application for geocaching and is not associated with any specific geocaching service provider.

Getting started

- Installation and update of c:geo - How and from where to install c:geo and get updates?
- c:geo device permissions - Why does c:geo need the requested permissions on your device?
- First steps with c:geo - First start of the app and authentication of the geocaching services
- Basic use of c:geo - What is Geocaching and how to find your first geocache with c:geo?

Users manual

Main menu

- Main screen - The functions of the main menu
  - Top bar menu - The menu functions on the upper section of the main screen
