Trackable Handhabung

Unterstütze Trackables

c:geo unterstützt verschiedenste Typen von trackbaren Gegenständen von verschiedenen Plattformen:

Symbol	Typ	Beschreibung	Funktionen
	Travel Bug	Trackbare Gegenstände von geocaching.com	Vollständige Unterstützung alles Trackable-Funktionen.
	GeoKrety	Trackbare Gegenstände von geokrety.org	Vollständige Unterstützung aller Trackable-Funktionen
	GeoLutin	Trackbare Gegenstände von geolutins.com	Nur Suche nach Trackables und Anzeige der Trackable-Informationen.

Suche nach einem Trackable

Die meisten trackbaren Gegenstände haben zwei verschiedene Codes, die zur Identifizierung und Suche nach dem Trackable genutzt werden können:

- **Öffentlicher Tracking-Code:**
  Der nicht geheime Trackable-Code (z.B. TBxxxx, GKxxxx, GLxxxx). Dieser Code kann dazu genutzt werden nach dem Trackable zu suchen und seine Details anzuzeigen, aber kann nicht genutzt werden um den Trackable zu loggen.

  Du kannst den öffentlichen Code zur Suche nach einem Trackable entweder im Suchmenü oder der Schnellsuche verwenden.

  Die Suche zeigt dir die Trackable-Details des Trackables, von wo du den Trackable auch loggen kannst (wenn du den geheimen Code hast).

- **Secret tracking code:**
  A non-public tracking code typically only printed on the trackable item. This code is needed to post a log for a trackable item, to ensure that you have physically seen/moved this trackable.

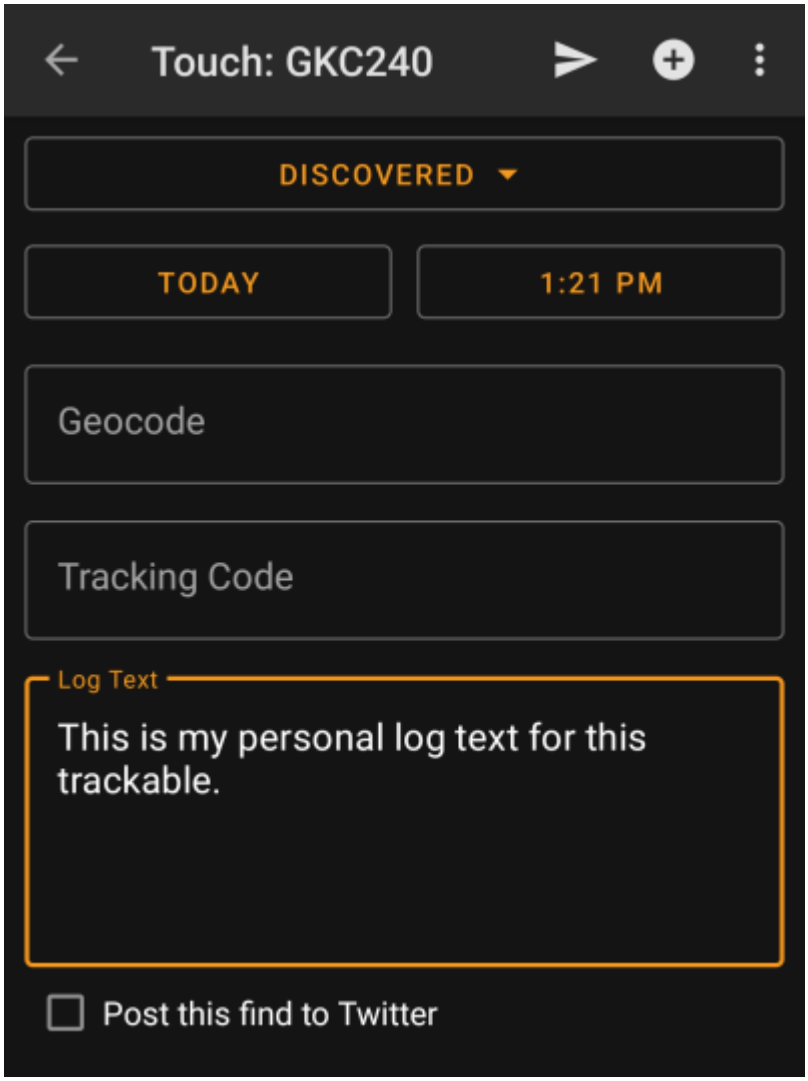
  The secret tracking code will be required while composing your trackable log. For geocaching.com trackables you can also use the secret code in the search function. This will not work for other trackable brands then Travel Bugs as c:geo can not distinguish the trackable brand by its secret code and therefore assumes geocaching.com as default.

  The quick search bar can also be used to search a trackable by its secret code unless it coincidentally starts with an identifier reserved for geocaches (e.g. GCxxxx, OCxxxx, OUxxxx), in which case c:geo cannot distinguish if you search for a secret code of a trackable or a geocache. In such cases you have to use the search function instead.

  The search will show you the trackable details of the trackable, from where you can start logging the

trackable.

Logging a trackable



From the trackable details view you can start logging the trackable, which will open this logging screen:

Top Bar Menu

The icons shown in the top bar and the contents behind the overflow menu button are distributed dynamically based on your device resolution and screen orientation. Thus it might be possible, that more or less items can be found behind the menu button or instead shown as icons in the top bar on your device.
In case a menu entry is shown as an icon you can long press the icon to get a popup showing its function.

Icon	Function	Description
	Send log	Use this button to send your log online after you finished composing it.
	Add a template	This allows you to either add a template or your signature to the log.
	Menu overflow button	Clicking here will open the menu of functions not fitting into the top bar on your device, thus being displayed as a list instead. The function shown in this list are also described in this table.
	Smilies	Opens a list of smiley tags you can insert into your log.
	Repeat last log	This function will insert the log text of the last trackable you logged into the log text field.

Log type

Depending on the trackable brand, its current state and if you are owner of the trackable, different log types can be selected by clicking on this field:

Log Type	Description
Retrieved	You retrieved this trackable from the geocache, where it is currently listed.
Discovered	You only want to report, that you have seen this trackable but did not perform any other action with it.
Dropped Off	You placed this trackable into a geocache. This log type is only available for GeoKrety, as geocaching.com dropped off logs are always combined with a cache log and therefore included on the geocache logging page.
Visited	You want to let this trackable visit a geocache. This log type is only available for GeoKrety, as geocaching.com visited logs are always combined with a cache log and therefore included on the geocache logging page.
Grabbed somewhere	You want to transfer this trackable into your inventory but did not find it in a cache but grabbed it from another user or an unknown location.
Note	You want to write a comment/note for this trackable.
Move to Collection	If a geocaching.com trackable is marked as collectible, you can use this log type to move the trackable to your personal trackable collection.
Move to Inventory	If a geocaching.com trackable is currently in your collection, you can use this log type to move the trackable to your inventory.

Log date/time

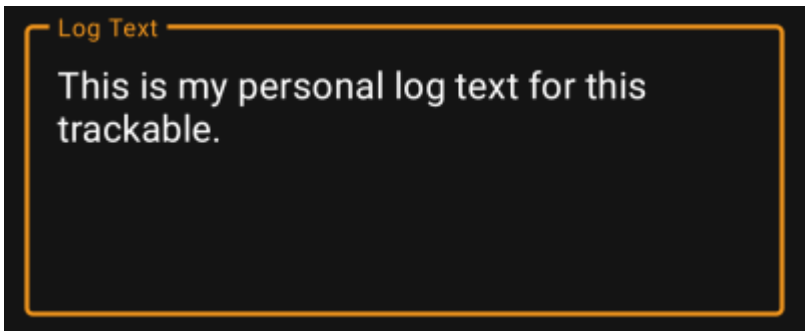
Select the date (and time - only supported for GeoKrety) associated with your log.

Tracking code

Enter the secret tracking code into this field before posting your log. You will need the secret code to post any log besides `Note`. GeoKrety also requires the secret code to post a `Note`.

The secret code will be already shown in this field if you used it to search for this trackable or if this trackable is currently in your inventory.

Log text



Enter your individual log into this field.

Social media

If you connected c:geo with Twitter in the settings this field will be shown. If you enable the checkbox c:geo will post a tweet in parallel to sending this log.

Special fields

In case you compose a `Dropped Off` log for a GeoKrety trackable, you will need to define the geo code and/or the coordinates of the cache, where you dropped this trackable.

Use the field `Geo code` to enter the geo code of the cache where your dropped the trackable or click on `Coordinates` to open the coordinate input dialog and enter the coordinates, where you dropped off the trackable.

Trackable Inventory

The trackable inventory is the list of all trackables you currently have in your hands (i.e. you retrieved them from a cache or grabbed them from another user).

At the moment c:geo does not support a dedicated view of your trackable inventory. However you will see you complete inventory on the inventory section of the cache logging page, while composing a log for a geocache.
