Hauptbildschirm

Diese Seite beschreibt die Informationen und Funktionen des c:geo Hauptbildschirms.

Hauptsymbole

Die folgende Tabelle gibt dir eine Übersicht über die Symbole im Hauptmenü:

Symbol	Funktion	Beschreibung
	Live-Karte	Die Live-Karte zeigt eine Karte mit Geocaches um deinen aktuellen Standort. Sie kann bewegt werden, um zu sehen welche Geocaches es an anderen Standorten gibt. Du brauchst eine Internetverbindung um die Karte und aktuelle Geocache-Positionen darauf zu sehen. Beachte bitte, dass die angezeigten Geocaches ggf. gefiltert sein können, siehe den nächsten Eintrag für mehr Informationen.

Symbol	Funktion	Beschreibung
	Nearby Search	Gives you a list of nearby caches. Unlike the live map, this item starts an online query based on your current location (as acquired from GPS or the network). It does not automatically update when you move. You need to have online network access to use this function. In case you do not have a valid GPS signal or other location information, the menu item will be disabled.
	Stored Caches	Shows your stored caches, ready for offline operation. However, you can use this list not only for offline caching, without network access, but also for online caching as a kind of to-do list. This list avoids unnecessary network traffic and delays. If you have stored geocaches then this symbol shows the total number of stored caches in its top-right corner. You can long press this icon to have direct access to a certain list.
	Search	Search for caches by keywords, geo code identification, address, user name, etc.
	Go To	Navigate to any arbitrary location using the compass, radar, turn-by-turn navigation or any other supported navigation method.
	Global Cache Type Filter	Filter the caches shown on the live map, nearby list, and when searching by type. Please note that you can either see all caches or only filter on exactly one type of cache. The text under this symbol will reflect the type of filter which is currently active. You can long press this icon to reset the filter.

Top Bar Menu

The top section of the main screen contains additional functions either shown as an icon in the top bar or hidden behind the so called overflow menu button (three-dot button). All available functions are described below.

The icons shown in the top bar and the contents behind the overflow menu button are distributed dynamically based on your device resolution and screen orientation. Thus it might be possible, that more or less items can be found behind the menu button or instead shown as icons in the top bar on your device.

In case a menu entry is shown as an icon you can long press the icon to get a popup showing its function.

Icon	Function	Description
	Quick search	In contrast to the main menu search function this quick search will search through all your stored caches as well as online and provide you a list of results matching your search term. For offline this search covers almost all cache information such as e.g. title, geo code, description, owner, log contents, and some more. For online search you can e.g. input a geo code, trackable code, username, any much more.
	History	This will bring up a list of caches you recently logged with c:geo. Please note, that this is a local list in c:geo and not synchronized with the recently viewed caches list on the geocaching website.
	Overflow menu button	Clicking here will open the menu of functions not fitting into the top bar on your device, thus being displayed as a list instead. The function shown in this list are also described in this table.
	Pocket Queries	Opens a list of pocket queries found on the geocaching.com server (this item is not available for geocaching.com basic members).
	Settings	This will open the c:geo configuration menus
	Backup	This is a shortcut to the backup function which can be also found in the c:geo Settings .
	Utility programs	You can find links to some other geocaching related apps here, which can be useful in conjunction with c:geo.
	Scan Geocode	If a barcode scanner app is installed on your device, this function will start scanning for bar codes of geo codes.
	Invite friends	This function will open the Google app invitation dialog, where you can recommend c:geo to your Google contacts
	About c:geo	This function will show c:geo version information, contributors, contact links and other nice to know things about c:geo.

Bottom section

This section on the main screen shows you information about your login status and information about your current location and satellite status.

Login status

At the top of this section you will find one dedicated row with login status information for each [Geocaching Service](#) you configured and enabled in the [c:geo Settings](#).

In this example your username is My username and you are successfully logged in to geocaching.com (GC) and opencaching.de (OC .DE). The figure shown behind the username is the current find count achieved on the respective geocaching platform.

Current location

Just below the login status you will find your current location either in form of the coordinates or (in case [Show address](#) is enabled) the country and city/region you are located.

In this example the user is located in USA, New York

Satellite status

The last row in this section shows you the current satellite reception status as follows (example from the picture above):

Status	Description
Sat: 5/22	The satellite receiver of your device has found 22 satellites in total and the signal is fixed to 5 satellites.
+ - 4,65 m	The current positioning accuracy is 4,65 meters (might also display feet instead of meters depending on your settings)
0 km/h	The current speed is 0 km/h (might also display ft/h instead of km/h depending on your settings)
Last known	Shows the source of the currently used location: Last known = Last known position c:geo acquired Home = Home Coordinates as defined on geocaching.com GPS = Position provided by GPS receiver Network = Location derived from mobile network information Fused = Using Google Play Services as well as data received from GPS receiver for better positioning
