Geocache Details

The cache details pages provide you all information about a specific cache. They can be opened by clicking on a cache in a [list](#), from the [live map](#) or by direct [search](#) for the geo code of a cache.

The cache details are distributed over several tabs accessible by swiping from left to right or vice versa. Unless you changed this in the [settings](#) the details tab will always open first.

At the [bottom section](#) of each tab you can see the name of the current tab and you can also use this to navigate between the tabs. The [top bar menu](#) is the same on all tabs.

You can see the complete order of the tabs in the table below. Clicking on the images in the table will open a larger version, clicking on the headline will directly take you to the relevant section in this user guide:

Top bar menu

The top bar is available from all tabs and provides several functions related to the cache:

The icons shown in the top bar and the contents behind the overflow menu button are distributed dynamically based on your device resolution and screen orientation. Thus it might be possible, that more or less items can be found behind the menu button or instead shown as icons in the top bar on your device.

In case a menu entry is shown as an icon you can long press the icon to get a popup showing its function.

Icon	Function	Description
	Preferred navigation	A short click on this icon will start your preferred navigation tool to navigate to the selected cache.
	Navigation	Will open the complete list of available navigation tools.

Icon	Function	Description
	Menu overflow button	Clicking here will open the menu of functions not fitting into the top bar on your device, thus being displayed as a list instead. The function shown in this list are also described in this table.
	Log Visit	This opens the logging window to log the cache.
	Caches around	This option starts a nearby search around the coordinates of the cache and will display the results.
	Store	Will store the cache to your lists or - if it is already stored - allows you to store it to another list.
	Refresh	Selecting this option will refresh the cache information by updating it from the geocaching server.
	Remove	This will delete the cache from your lists.
	Vote	This will open the GCVote dialog for the cache.
	Share cache	Will share a link to the cache using the built-in Android share options.
	Open Geochecker	This will open the geochecker of this cache in your web browser.  This menu entry is only available if the cache description of this cache contains a link to a (known) geochecker.
	Ignore cache	This will put the cache on the servers ignore list.  Ignoring a cache means, that this cache will never occur again when loading data from the geocaching server. You will only be able to see the cache again by unignoring it on the geocaching website.
	Extract Waypoints	This function will scan the cache description for valid coordinates and automatically create a waypoint for each coordinate found in the listing. This can be a helpful feature in case the cache owner did not create dedicated waypoints but only lists the coordinates in the cache description.
	Export	Allows you to export the caches as GPX, a field note or its personal note.
	Personal note	This function will directly open the editor for the personal note, which can also be found in the description tab
	Invite friends	This function will open the Google app invitation dialog, where you can recommend c:geo to your Google contacts.

Details tab

This is the tab opened by default (unless you changed the behavior in the [settings](#)) and shows you the most important information about the cache.

Cache information

This section of the details tab provides information about the cache:

Line	Description
Name	The title of this cache.
Type	Type of the selected cache.
Geo code	Geo code of the selected cache.
Status	The status of this cache. It will show you whether you have found the cache (incl. find date) or you stored an offline log for it. Furthermore it will provide info whether the cache is disabled, archived or for Premium members only.
Distance	Distance to the coordinates of the selected cache from your current position.
Difficulty	Difficulty rating of the selected cache shown as decimal value as well as graphical.
Terrain	Terrain rating of the selected cache shown as decimal value as well as graphical.
Rating	Shows the quality rating of this cache from GCVote if this service is enabled in the c:geo settings as decimal value as well as graphical. The value shown in parenthesis is the number of votes given for this cache.
Favorite	The amount of favorite points (geocaching.com) or recommendations (Opencaching platforms) the selected cache has been awarded.
Your Rating	Shows the rating you gave to this cache on GCVote if this service is enabled in the c:geo settings as decimal value as well as graphical.
Owner	The name of the owner of this cache. You can click on this field to open a context menu to perform actions related to this owner.
Hidden	The date this cache was hidden.
Location	The country/state/county of this cache.
Coordinates	The cache coordinates. You can click on this field to show it in different other coordinate formats supported by c:geo.

You can long click on some of the fields listed above to copy the information to your clipboard or share it.

Attributes

Cache location
 Recommended for kids
 Available at all times
 Thorns
 Stealth required

Around the cache
 Wheelchair accessible
 Parking available

This section of the details tab will show you the attributes the owner has assigned for his cache as a list of icons. The section might also be omitted, in case the owner did not assign any attributes for this cache.

You can click on the [attribute icons](#) to get them shown as a textual list instead.

List Management

This section of the cache details provides several options to manage the storage state of the cache.

Stored in device
 a few minutes ago 

Lists: **Stored**  

Icon/Option	Description
	This field provides information if the selected cache is stored on your cache lists and for how long the cache is stored (i.e. gives you an indication of how up-to-date the shown details are).
	Clicking this button will refresh the cache information by updating it from the geocaching server.
Lists: Stored	In case the selected cache is already stored in your cache lists this field shows you the list(s) it is stored in.
	This button is only shown if the selected cache is not yet stored in your cache lists and will store it. A long press on this icon will store the cache to the last used list, instead of asking for the list.
	If the selected cache is already stored in your cache lists this icon is shown and allows you to modify the list or add the cache to another list.
	If the selected cache is already stored in your cache lists this icon is shown and allows you to delete the cache from your lists.

Watchlist

This section allows you to add/remove the cache from your personal watchlist.

The watchlist is a function of the geocaching provider. Having a cache on your watchlist will make you receive a mail notification if a new logbook entry is added for this cache.

The  or  button will add/remove the cache to/from your watchlist. The Watchers : value shows you how many people have this cache on their watchlist.

Favorite

This section shows, whether you awarded a favorite point to this cache.

The  or  buttons are only shown if you found this cache and will add/remove the cache to/from your favorites.

Waypoint tab

This tab contains all information about the waypoints of the cache. It will show the waypoints defined by the owner and allows you to add your custom waypoints for this cache.

The waypoint information is structured like this:

Line	Description
Title	Icon and title of the waypoint
Type and Reference	Waypoint type and reference code (as provided by server) or Custom if the waypoint has been created by the user.
Coordinates	The coordinates of the waypoint. The field might also be empty if either the owner did not provide coordinates for the waypoint or you created a waypoint without coordinates (or using the waypoint calculator not yet providing valid coordinates).  You can click on the coordinates to get them shown in other supported formats.
Description	Contains the description for this waypoint.
	This icon is shown at the right side of each waypoint if it has coordinates. A short click will start your default navigation , a long click will start the secondary preferred navigation towards these coordinates.

A short click on the waypoint itself will the [waypoint editor](#). A long click on the waypoint will show a [context menu](#) providing more options for the waypoint.

Clicking on Add a Waypoint will open the [waypoint editor](#) to create your custom waypoint for this cache.

Waypoint types

Waypoints can have different types as listed below:

Icon	Name	Description
	Parking Area	Parking coordinates related to the cache.
	Question to Answer	A waypoint of a cache, where no physical stage of a cache is hidden but you typically have to answer a question, which might be provided in the description of the waypoint.
	Stage of a Multi cache	A waypoint of a cache, where a physical stage is hidden providing more information to solve the cache.
	Trailhead	The coordinates of this waypoint typically provide a guidance about the path to use to reach the cache or the next waypoint.
	Reference Point	A generic reference point, which can be used for multiple purposes.
	Final Location	Providing the location of the final cache container.

Waypoint editor

The following table provides a description about the input fields of the waypoint editor:

Section	Description
	Clicking on the coordinate field will open the coordinate input dialog .

Section	Description
	<p>After entering the coordinates you can use the Bearing and Distance fields to perform a coordinate projection. After saving the waypoint the coordinates will be calculated according to the projection data.</p>
	<p>Clicking this field will open a drop down menu to choose the waypoint type.</p>
	<p>You can enter the waypoint title and user notes for this waypoint in these fields. The title field is prefilled automatically depending on the waypoint type selected.</p>
	<p>Activating this box will set the waypoint as Visited, thus showing it with a tick icon on the waypoint list and making its icon background transparent on the map.</p>
	<p>You can optionally replace the cache listing coordinates by the coordinates of this waypoint. This can be done either locally or (if the geocaching provider supports it) also on the geocaching server. This is a helpful feature to move the cache icon to the real final coordinates (e.g. solved mystery cache or last stage of a multi cache) and also store the coordinates permanently on the geocaching website.</p>

Waypoint context menu

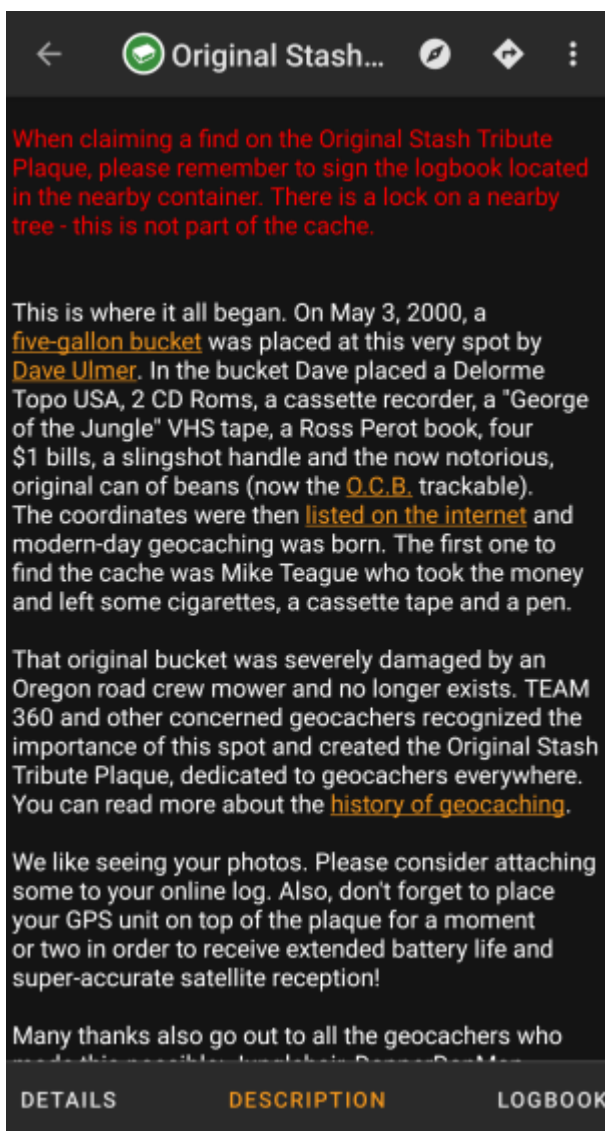

A long click on a waypoint will open this context menu providing you the following options for this waypoint:

Option	Description
Edit	Start the editor for this waypoint. Same as short click on a waypoint.
Visited	Set this waypoint as visited, thus showing it with a tick icon on the waypoint list and making its icon background transparent on the map.
Copy coordinates	Copy the waypoint coordinates to the clipboard.
Clear coordinates	Delete the coordinates of this waypoint. This option is only available on custom waypoints.
Duplicate Waypoint	Creates a new waypoint using all information of the existing waypoint. This option is helpful to clone a server defined waypoint in order to edit it afterwards.
Delete	Deletes this waypoint. This option is only available on custom waypoints.
Compass	Start compass navigation to the coordinates of this waypoint.
Navigate	Open the full list of navigation options for this waypoint.
Caches around	Performs a nearby search for caches around the coordinates of this waypoint.

Description tab

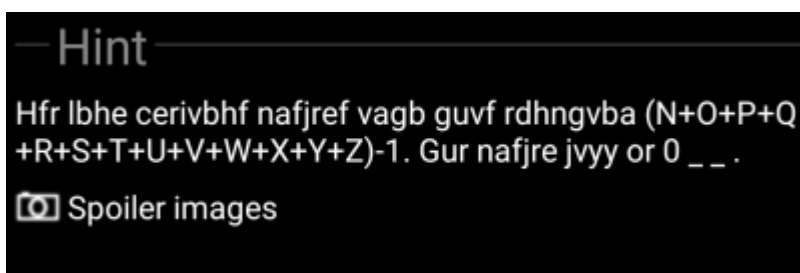

Cache description

The description tab mainly contains the cache description the owner provided. Below the scroll able cache description you will find additional sections for the [cache hint](#) and for your [personal cache note](#).

You can click on the cache description to copy the text or parts of it to your clipboard. Furthermore you can use it to trigger [translating](#) the description into another language.

Hint section

This section contains the secret hint if the owner provides one. By default the hint is encoded (left picture) in order not to spoil the cache location. To decode it, simply click on the encoded text (right picture).

If the owner uploaded a spoiler picture, you will find a clickable link to this picture below the hint text.

Personal note

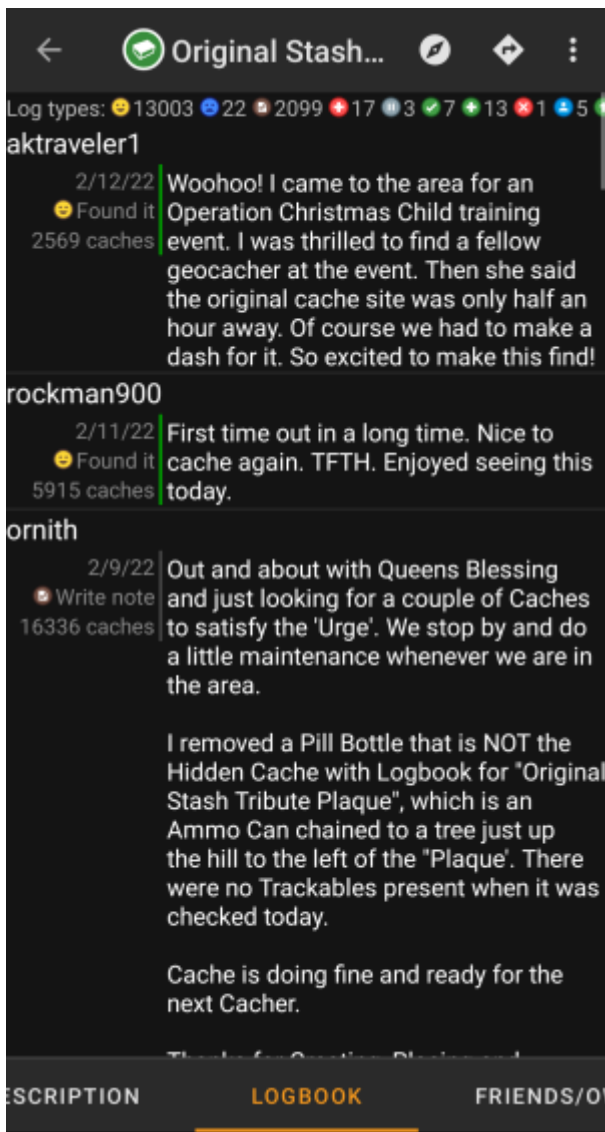

This section contains your personal cache note. Notes you have entered on the geocaching server will be shown here, and you have the possibility to add/edit the note and upload it to the server (for geocaching.com uploading is only supported for [premium members](#)).

If different cache notes exist on the server and locally in c:geo while the cache is refreshed, both notes will be kept and separated by - - -.

Logbook tab

The cache details can contain two different logbook tabs. The tab named Logbook contains the most recent 35 log entries of the cache, while the tab Friends/Own Logs contains all the logs of your geocaching friends (a server function of geocaching.com) as well as all your own logs for this cache.

On the top of the logbook you will find the logbook summary of the cache, providing information about which type of logs and how many of them have been posted for this cache.

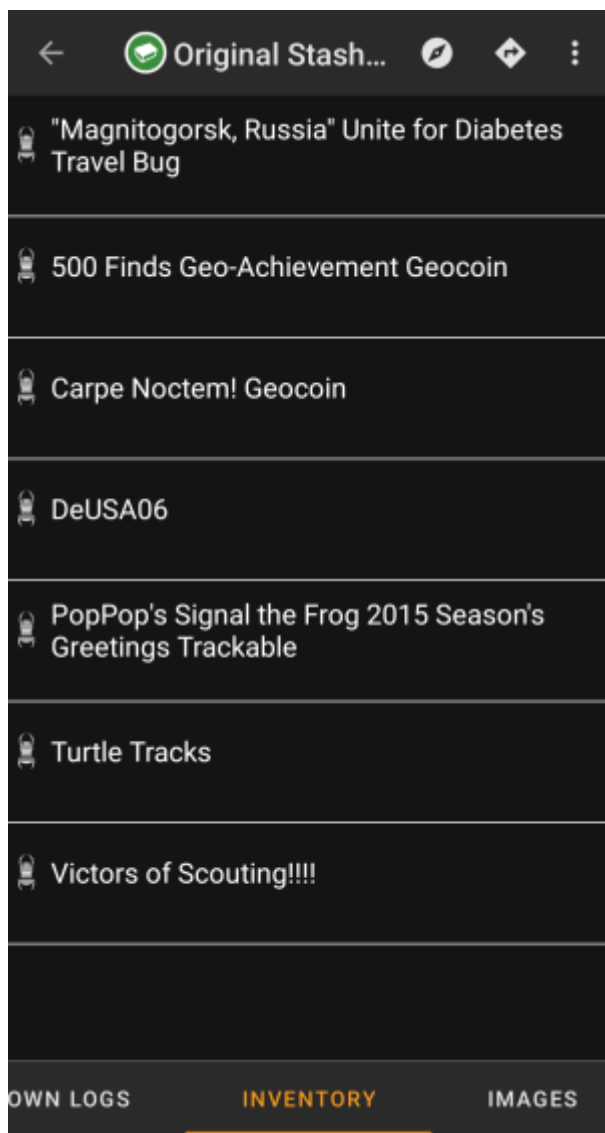

Below you will see a scroll able list with the log entries, each containing the username, the log date, the log type, the total finds of the user and the log text. Color marks indicate the different log type allowing an easy distinction between “good” log types (e.g. found, activated) and “bad” log types (e.g. Not found, Deactivated).

 In case the log contains spoilers, the logging user can decide to encrypt the log entry. In this case you can click on the log entry to decode the log text.

Clicking on the username will open a context menu with owner related [search options](#).

Long click on the log text allows you to copy the text to your clipboard. Furthermore you can use it to trigger [translating](#) the log into another language.

Inventory tab

This tab shows the trackable inventory of the cache. The tab is only present if the cache contains trackables.

It will show the type icon and the name of the trackable. Clicking on a list entry will open the [trackable detail page](#), providing more information about the trackable.

Image tab

This tab contains the images available for the cache. It will contain all pictures from the cache description as well as all pictures attached to logbook entries available in the [logbook tab](#).

This is not the same function as the cache gallery on the geocaching web page, as only the log pictures of the most recent 35 logs but not all are shown here.

Clicking on an image opens the picture in your default image viewer.

If the image contains coordinates in its header info, a small compass rose icon will be shown on the lower left corner of the image. In this case you can short click or long click on that icon to start your preferred or secondary preferred [navigation](#). Long click on the image itself will in this case open a context menu, where you can create a new waypoint with these coordinates.
