Registering c:geo with Opencaching platforms 5

First steps with c:geo

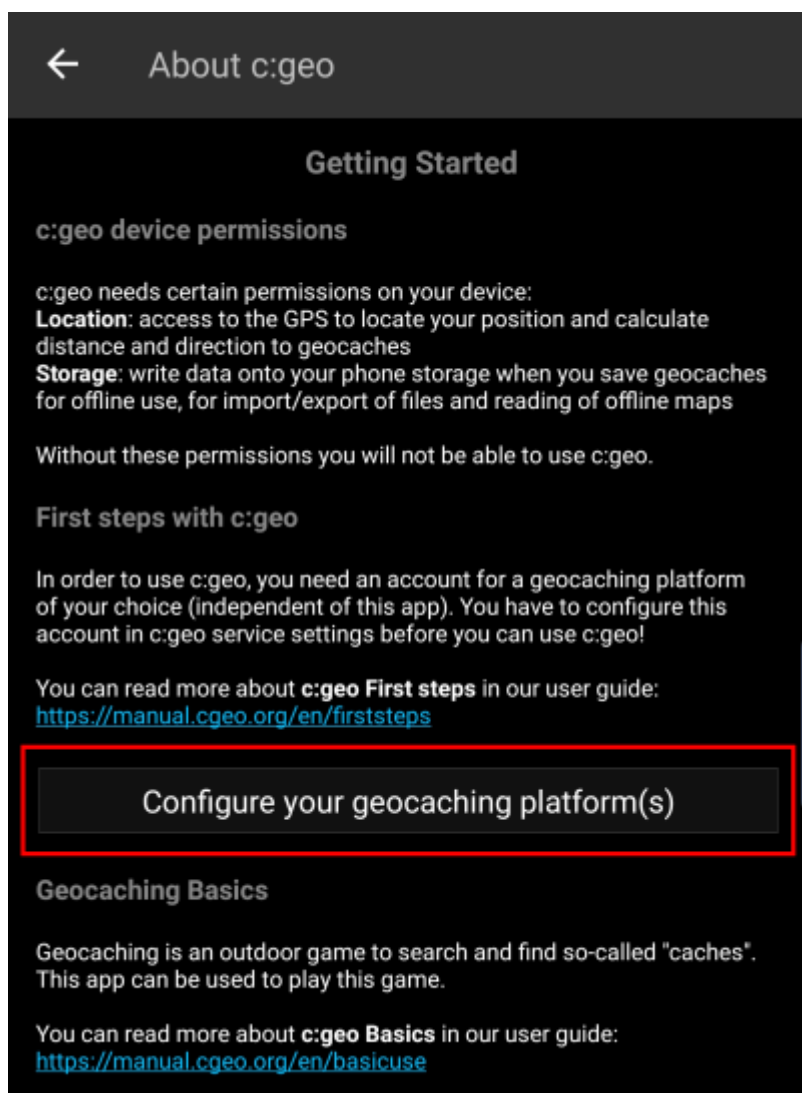

In order to use c:geo, you need an account of a geocaching platform of your choice. c:geo currently supports [geocaching.com](https://www.geocaching.com), an international commercial geocaching platform, as well as OpenCaching platforms in several countries (e.g. [Opencaching USA](https://www.opencaching.com), [Opencaching UK](https://www.opencaching.co.uk), and many more). Select a platform you would like to use, and upfront create an user account on their web page (Basic accounts are normally free of charge).

Without an account for a geocaching platform c:geo will not work!

Registering c:geo with geocaching.com

If you start c:geo for the first time after installation, you will be directly taken to the following "Getting started" screen:

It explains the [permissions](#) c:geo needs on your device, offers links to this user guide and - most importantly - offers a button to setup the connection to geocaching platforms.

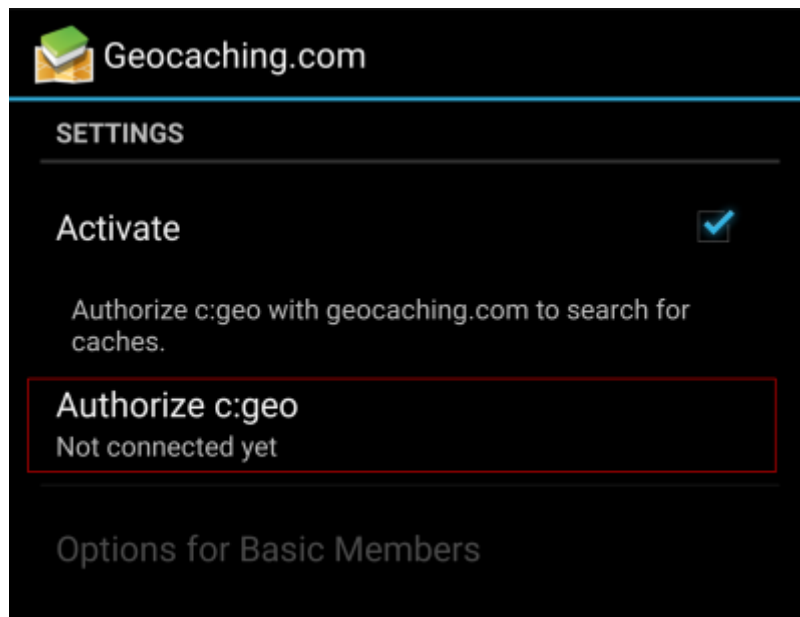

If you click on **"Configure your geocaching platform(s)"** you will directly be taken to the service settings

where you can authorize c:geo to communicate with the geocaching platform of your choice as described below.

If you would like to access the service settings for geocaching.com again after the first start, you will find them in:

Menu → Settings → Services → geocaching.com

Now select the geocaching platform you want to use and afterwards click on the button **Authorize c:geo** as shown below::

After clicking on **Authorize c:geo** a window will be shown, where you can enter your username and password for geocaching.com and finally click on **Check authentication**.

If you do not yet have an account, you may click on the button **Create an account** to open the registration page of geocaching.com.

The screenshot shows the c:geo app interface for connecting to Geocaching.com. At the top, the c:geo logo is displayed. Below it, a message states: "The following process will allow c:geo to access Geocaching.com." This is followed by an instruction: "Filling your credentials and pressing the 'Check authentication' button will start the process. This process will connect to Geocaching.com and validate your credentials. That's all." There are two input fields: "My Username" and a password field represented by dots. Below these fields are two buttons: "Check authentication" and "Create an account".

After completing the registration, c:geo will automatically return to the service menu and you can see the successful registration as your username and your avatar will be shown:

The screenshot shows the "Geocaching.com" settings screen in the c:geo app. The title "Geocaching.com" is at the top. Below it, the "SETTINGS" section is visible. Under "Activate", there is a checked checkbox. A message says: "Authorize c:geo with geocaching.com to search for caches." Below this, there is a section titled "Authorize c:geo again" with the text "Connected as My Username" and a small c:geo logo. This section is highlighted with a red border. At the bottom, the text "Options for Basic Members" is visible.

If the registration fails, please take a look in our [FAQ](#) to get help.

Now you just have to select the back function on your device to reach the main menu of c:geo. At next start of c:geo you will be automatically taken to the main menu.

Registering c:geo with Opencaching platforms

If you want to connect c:geo with another service than geocaching.com or re-access the service settings, you will find them in:

Menu → Settings → Services

You can find more information regarding the geocaching services supported by c:geo [here](#).

Select a geocaching platform, which you want to connect with and activate the service in the following screen by clicking the Activate box. Afterwards start the authorization process by clicking on Authorize c:geo.

and Start authorization in the next screen. If you do not yet have an account, you may click on the button Create an account to open the registration page of the Opencaching platform.

You will now be taken to the web page of the Opencaching platform in your browser. Login to the web page with your username and password and - where required - agree on the following page to give c:geo access to your Opencaching account.

The screenshot shows the OpenCaching website's login page. The browser address bar displays `www.opencaching.us/login.php?target=ol`. The page header includes the OpenCaching logo, the text "OPENCACHING Geocaching in North America", and a cartoon character. A navigation bar contains links: MAIN PAGE, OC WIKI, FORUM, BLOG, SOCIAL MEDIA, OCNA SWAG!, and TRACKABLES. On the left, a "MAIN MENU" sidebar lists various links. The main content area is titled "Login" and features input fields for "Username:" (containing "My username") and "Password:" (containing "*****"). Below these are "Reset" and "Login" buttons. Links for "Not registered? Register" and "Forgot your password? Remind Me" are also present.

After completing the registration c:geo should open again and report the successful registration:

The screenshot shows the "SETTINGS" screen in the c:geo application. At the top is the OpenCaching.us logo. Under the "SETTINGS" header, the "Activate" option is checked, with the text "Load caches from opencaching.us". Below this, it says "Authorize c:geo with opencaching.us to search for caches and access/filter your found caches." A red-bordered box highlights the "Authorize c:geo again" option, which is currently set to "Connected".

If you receive an error message or you do not return to c:geo, please try to use another browser for registration. Please also check, if date and time on your device are correctly set.
