Search function 2

Search function

The search menu provides several search functions as described below. All location and user based searches will provide a [list of caches](#) as result, whereas the geocode search and the trackable search will directly open the resulting [geocache details](#) or [trackable details](#).

 Basically all search functions will use all enabled geocaching platforms simultaneously and provide the result in a combined list across all geocaching services. This depends on the functions supported by the specific geocaching service as listed in [the service setting menu](#).

| Search Function | Description |
|---|---|
|  | Clicking this icon will load a list of your owned caches |
| Coordinates | Search for caches around coordinates provided. Refer to the Coordinate dialog for more information. |
| Address | Search for caches around a street address. We use the Google geocoding service to find the address and convert it into coordinates. |

| Search Function | Description |
|-----------------|---|
| Geo Code | Search for a specific geocode in all supported platforms depending on the code prefix (e.g. GC77, OC1234). |
| Keywords | Search for caches starting with the keyword provided.  A keyword search for all caches containing the keyword is currently not possible due to technical limitations. |
| Found by user | Search for caches found by the username provided. |
| Hidden by user | Search for caches hidden by the username provided. |
| Trackable | Search for a trackable by using its public or secret tracking code. This search supports geocaching.com trackables as well as other trackable services (e.g, GeoKrety). |
