User defined caches 2

How to perform a waypoint projection 2

User defined caches

You can create user defined caches with c:geo. Those can be used e.g. for planning your own caches as well as just for recording some points of interest.

You can create user defined caches in two ways:

1. Open a list of saved caches and select Manage Caches → Create user defined cache from the [list menu](#).
2. Long click on the map to trigger creation of a user defined cache. This long click function needs to be enabled in [map behavior settings](#).
