# **Main Screen**

This page will describe the information and functions of the c:geo main screen.

## Main icons

The following table will give you an overview of the main menu icons:

lcon	Function	Description
	Live Map	The live map shows a map around your current location with geocaches marked on it. It can be panned around to see what geocaches are in other locations. You need online network access in order to see the map and the most up-to-date cache locations. Please note that the geocaches shown are subject to filtering, see below for more information.

lcon	Function	Description
	Nearby Search	Gives you a list of nearby caches. Unlike the live map, this item starts an online query based on your current location (as acquired from GPS or the network). It does not automatically update when you move. You need to have online network access to use this function. In case you do not have a valid GPS signal or other location information, the menu item will be disabled.
	Stored Caches	Shows your stored caches, ready for offline operation. However, you can use this list not only for offline caching, without network access, but also for online caching as a kind of to-do list. This list avoids unnecessary network traffic and delays. If you have stored geocaches then this symbol shows the total number of stored caches in its top-right corner. You can long press this icon to have direct access to a certain list.
	Search	Search for caches by keywords, geo code identification, address, user name, etc.
<u>2</u> 2 2 2 2 2	Go To	Navigate to any arbitrary location using the compass, radar, turn-by-turn navigation or any other supported navigation method.
	Global Cache Type Filter	Filter the caches shown on the live map, the search and your lists by cache type. Please note that you can either see all caches or only filter on exactly one type of cache. The text under this symbol will reflect the type of filter which is currently active. You can long press this icon to reset the filter.

4/6

## Top Bar Menu

The top section of the main screen contains additional functions either shown as an icon in the top bar or hidden behind the so called overflow menu button (three-dot button). All available functions are described below.

The icons shown in the top bar and the contents behind the overflow menu button are distributed dynamically based on your device resolution and screen orientation. Thus it might be possible, that more or less items can be found behind the menu button or instead shown as icons in the top bar on your device.

In case a menu entry is shown as an icon you can long press the icon to get a popup showing its function.

### **Bottom section**

	34 caches stored	
	Germany,	
Sat: 16/26	±26.1 ft · 0 mph	Fused

This section on the main screen shows you information about your login status and information about your current location and satellite status.

### Login status

At the top of this section you will find one dedicated row with login status information for each Geocaching Service you configured and enabled in the c:geo Settings.

In this example your username is My username and you are successfully logged in to geocaching.com (GC) and opencaching.de (OC.DE). The figure shown behind the username is the current find count achieved on the respective geocaching platform.

### **Current location**

Just below the login status you will find your current location either in form of the coordinates or (in case Show address is enabled) the country and city/region you are located. In this example the user is located in USA, New York

#### Satellite status

The last row in this section shows you the current satellite reception status as follows (example from the picture above):

Status	Description
Sat: 5/22	The satellite receiver of your device has found 22 satellites in total and the signal is fixed to 5 satellites.
+- 4,65 m	The current positioning accuracy is 4,65 meters (might also display feet instead of meters depending on your settings)
0 km/h	The current speed is 0 km/h (might also display ft/h instead of km/h depending on your settings)
Last known	Shows the source of the currently used location: Last known = Last known position c:geo acquired Home = Home Coordinates as defined on geocaching.com GPS = Position provided by GPS receiver Network = Location derived from mobile network information Fused = Using Google Play Services as well as data received from GPS receiver for better positioning
