## Map Sources

The following map types are available in c:geo. You can change between the map types in the [settings](#) or in the menu of the [map](#).

Name	Description
Google:Map	An online street map provided by <a href="#">Google</a> .
Google:Satellite	An online satellite view map provided by <a href="#">Google</a> .
OSM:Mapnik	An online street map provided by <a href="#">OpenStreetMap</a> .
OSM:Offline	<a href="#">Offline maps</a> rendered from map files in <a href="#">Mapsforg</a> format. Instead of OSM:Offline the names of the available map file will be shown in the selection menu.

Currently c:geo does only support Google maps v1, which are not supporting rotation of the maps. Thus all maps are always displayed northbound. We are however working on implementing a newer Google maps version.
